

Subject Index

A

- Afferent fibres (*see also* Muscle spindles, Tendon organs)
defined as Ia or Ib, 49, 103
defined by Lloyd's groups, 49
- Alpha fusimotor neurons
alpha and beta fibres of, 44, 72, 95–99
axon conduction velocities of, 98
dynamic properties of, 43, 93, 99, 270
evidence for, 95–99
- Alpha-gamma linkage
automatism in, 197, 200, 253, 261, 262, 268, 271, 275
cortical, 201, 210, 212, 218
destroyed, 170–172, 245–247
in amphibians, 26, 36, 271
in brain stem stimulation, 164, 223, 225, 227, 229, 233
in cerebellar activity, 243–247
in jaw muscles, 168
in kittens, 172
in limb muscles, 165, 167–170, 183, 185, 229, 239, 261, 262
in respiratory muscles, 168, 185, 188–192, 199–200
in stepping, 260–262
in vestibular paths, 229, 239
in voluntary contractions, 167–170, 175, 186, 201, 210, 211
- Arousal, 227, 230–232, 235, 236, 265
- Autogenetic, term defined, 103

B

- Baboon's hand muscles, 207–210
- Back-response, 72, 95, 117
- Beta fibres (*see* Alpha fusimotor neurons, Motor endings, fusimotor)
- Brain stem sites
activating alphas, 228–230
activating gammas, 79, 164, 165, 226–229, 236–238

- olivary nucleus, 238, 241
red nucleus, 228, 236–238
reticular formation, 226–229, 231
- Bulbar pyramids, 228
- Bulbo-spinal correlation system, 230

C

- Caudate nucleus, 231
- Cerebellar rigidity, 170, 171, 181, 182, 245–247
- Cerebellum (*see also* Rigidity, Tracts), 140, 170, 171, 236, 238–247
dynamic and static fibres from, 244–247
inhibition from, 150, 170, 180, 181, 240–242
projections of afferents onto, (*see* Tracts)
Purkinje cells in, 140, 171, 240–242
spindles fired from, 79, 170, 171, 181, 193, 194, 243–247
- Chlorpromazine, 171
- Clasp-knife effect, 180
- Cocainization (*see* Motor axons, gamma)
- Crayfish stretch receptor, 125, 126
- Curarization
of extrafusal muscle, 95, 97, 98, 105–108, 190, 260, 272
of intrafusal muscle, 37, 43, 97, 98, 105–108

D

- Decerebration
anaemic, 129, 170, 171
cryoscopic technique of, 246
precollicular, 266
- Decerebrate rigidity (*see also* Rigidity)
decerebrate and spinal state compared, 234, 235
discussion of factors in, 165–167, 170, 171, 179–184, 234, 235
inter- and precollicular compared, 266

- Diaphragm
 innervation ratios of, 10
 muscle fibres of, 18, 198
 sense organs in, 197, 198
 Dis-facilitation, 114, 118, 128, 130, 164
 Dis-inhibition, 130, 159
 Displacement v. force, 202, 203, 214–215
 DOPA, 229, 235
 Dorsal root section (*see also* Rigidity, alpha type of),
 its effect on motor control, 165, 191, 192, 217

E

- Electroencephalograms, 230–234
 Ephaptic discharges (*see also* Back-response), 95
 Extrafusal muscles (*see also* Motor units)
 active state in, 25
 amphibian, 5–9, 21
 contraction times of, 14–16, 18–21, 116, 209, 252
 crossing nerves of, 14, 21, 22
 Felderstruktur v. Fibrillenstruktur of, 9
 force-velocity relations of, 24, 25, 185
 histochemistry of, 2–6, 10, 11, 18, 19, 21
 innervation ratios of, 10, 11
 length-tension relations in, 23, 24, 177–180
 pale, 1–5, 7, 13, 20
 phasic, 1, 10, 13
 red, 1–3, 7, 11, 13, 18
 stiffness in, 92, 272
 tonus bundles of, 7–9, 36, 43, 80, 93, 252
 twitch fibres of, 5–9, 80, 252
 vascularization of, 2
 viscosity of (*see* Viscosity)
 Extrapyramidal routes, 211, 214
 Eye movements
 nystagmus, 254, 255
 position sense, 254
 role of spindles in, 250, 253–259
 stabilized images and, 254
 Eye muscles, extrinsic
 gamma fibres to, 251
 innervation of, 248–251

- muscle types of, 8, 9, 249, 252, 257
 neck receptors and, 254, 255, 257–259
 spindle-like organs in, 248–250
 spindle discharges from, 251–253, 255, 257
 spindle functions interpreted, 249, 250–259
 tendon organs in, 248, 250, 255, 256
 tension measurements in, 255, 256

F

- Feedback (*see* Servo-theoretical notions)
 Firing index, 102
 Flaxedil (*see* Curarization)
 Flexor reflex afferents (FRA), 110, 213
 Force-velocity problems considered
 in relation to motoneurons, 141, 142, 185, 209, 212, 215, 252, 257
 in relation to muscles, 24, 25, 235, 271, 273–275
 in relation to muscle spindles, 185, 225, 251, 267, 271–276
 Fusimotor, term defined, 42 (*see* Alpha fusimotor . . . Gamma . . .)
 Fusimotor descending paths
 monosynaptic on motoneurons, 227–230
 polysynaptic on motoneurons, 227–229
 reticulo-spinal, 228–230
 rubro-spinal, 237–238
 vestibulo-spinal, 229–230

G

- Gain (*see* Motoneurons, alpha and Stretch reflexes, gain across)
 Gamma fusimotor neurons (*see also* Motor axons, gamma)
 afterhyperpolarization in, 153
 contributing to “arousal”, 227, 230–233, 236
 dynamic, defined, 81–83
 functions of, 92, 95, 164–177 (*see also* Servo-theoretical . . .)
 learning influencing, 216
 monosynaptic activation of, 227–230
 recurrent inhibition on, 156
 reflexes on
 from neck, 165, 168, 170, 194, 258
 from proprioceptors, 168

from skin, 168, 188, 194, 235, 236
 respiratory (*see* Respiration)
 spontaneous tonic activity of, 175, 188,
 193, 195, 251
 static, defined, 81–83
 volitional activation of, 168–170, 175,
 186, 201, 210, 211, 276
 Gamma loop (*see also* Alpha-gamma
 linkage, Stretch reflexes)
 activity filling-out silent period, 116–
 118
 in stepping, 259, 260
 stimulation across, 105–109
 supraspinal activation of, 164–166,
 168, 190, 191 and Chap. X
 Generator potential, 63, 125
 Globus pallidus, 231

H

Hippocampus, 130, 131, 140
 H-reflex, 174, 233

I

Inactivation, 139–141, 150, 241, 242
 Inhibition
 altering gain, 149, 150
 autogenetic, 105–108, 110–116
 cerebellar, 150, 170, 180, 181, 240–242
 cortical, 210, 212, 213, 214
 dis-facilitatory (*see* Dis-facilitation)
 linearizing role of, 150
 presynaptic, 112–113, 126, 159–162
 recurrent (*see* Recurrent inhibition)
 remote, 126, 128, 129
 Schiff-Sherrington type of, 150, 181
 tonic, 150, 180, 181
 Interneurons, 104, 105, 115, 154, 204,
 216, 220, 227, 236, 237, 265
 Intrafusal muscles
 amphibian, 26, 28, 32, 36
 anatomy of, 26–35
 bag and chain fibres of, 26–30
 “bifurcation” of, 31
 distribution of types of, 29–31
 effects of denervation on, 31
 elastic tissue in, 33–35, 64, 67, 74, 91, 92
 histochemistry of, 33
 mechanical properties of their isolated
 fibres, 33, 35, 81

number of, 31
 polyneuronal innervation of, 41, 83,
 84, 88, 89, 163, 164
 stiffness in, 92, 272
 stimulus frequency influencing, 36, 37,
 80–83, 108
 viscosity of, 33, 36, 63, 64, 74, 91, 92,
 94, 272

J

Jerks (*see* Stretch reflexes)
 Joint receptors, 202, 203, 258

L

Learning motor skills, 216
 Lengthening reaction, 171, 177–179
 Limitation of firing rate (*see* Stabilization
 of . . .)
 Load compensation (*see* Servo-theoreti-
 cal . . .)
 Lobster cardiac ganglion, 137

M

Mauthner cell, 130
 Miniature potentials, 128–130, 133, 134,
 177
 Monosynaptic testing, 101, 102, 134, 174
 Motoneurons, alpha (*see also* Motor
 axons, alpha)
 accommodation in, 122, 123
 activation noise of, 128–130
 adaptation of, 138–140, 151, 267, 270
 afterhyperpolarization in, 12, 115, 135,
 136, 140, 141, 146, 151–153, 156,
 197, 198, 212, 252, 272
 cortical monosynaptic projections on,
 205, 207–211
 crossed reflexes on, 120, 121
 delayed depolarization of, 135, 136
 dendrite-soma problems considered,
 122–126, 128–135, 272
 depolarizing pressure of, 130
 effects of primaries on, 102–109, 114–
 117, 209, 210 and Chap. XII
 effects of secondaries on, 109, 110,
 117–119, 180, 255, 265, 266, 276

- effects of tendon organs on, 106–108,
 110–115, 117, 120, 175, 177, 198,
 200, 255, 256, 261, 262
 firing zone of, 122, 135, 146
 frequency maxima of, 150, 252
 gain of, 146, 147, 150, 176, 178, 225,
 252, 267, 270, 271
 inactivation of (*see* Inactivation)
 intercostal, 188–193, 196, 197
 intracellular stimulation of, 102, 103,
 117, 135–142, 144–152
 maintenance function of, 136, 272
 membrane resistance of, 12, 13, 21,
 147, 150
 models of, 124–126, 130–134, 146,
 150
 monosynaptic activation of (*see above*,
 effects of primaries on)
 natural firing rates of, 100, 101, 141,
 178, 197, 252
 order of recruitment of (*see* Recruit-
 ment)
 phasic, 12, 20–22, 157, 178
 phrenic, 153, 198
 size of, 12, 13, 20, 147, 157
 size and gain related for, 147, 156, 178
 strategic localization of synapses on,
 126, 128, 134, 162
 tonic, 12–14, 21, 22, 143, 147, 151,
 153, 156–158, 176, 178, 181, 184,
 198, 264, 270
- Motoneurons, gamma (*see* Gamma fusi-
 motor neurons)
- Motor area (*see* Sensory-motor cortex,
 Pyramidal tract)
- Motor axons, alpha
 conduction velocities of, 12–17, 20–22,
 151–153, 197, 198
 intercostal, 197
 oculomotor, 257
 phrenic, 153, 178
 to slow and fast muscles, 12–17, 151–
 153
 transport of material in, 14, 21, 22
- Motor axons, gamma (for Beta fibres,
see Alpha fusimotor neurons)
 conduction velocities of, 40, 41, 84
 conduction blocked by alcohol, 166,
 167
 conduction blocked by cocainization
 of, 166, 175, 178, 181–190, 199,
 239
 dynamic and static (*see* Gamma fusi-
 motor neurons)
- Motor endings, alpha, 7, 8, 10, 42, 43
- Motor endings, fusimotor
 alpha fusimotor plates of, 39–41, 43,
 44, 93, 94, 99
 cholinergic, 41
 compared with alpha motor endings,
 39
 de-efferentation of, 39, 41
 gamma plates characterizing, 42, 44,
 80, 89, 93, 94
 gamma trails characterizing, 42–44,
 80, 89, 93, 94
 problems of distribution of, 39, 42, 44
 sprouting in, 44
- Motor units
 defined, 10
 fast (phasic), 14–16, 18–21, 178, 217,
 229, 235, 252
 in eye muscles, 249, 252
 in hand muscles, 183
 intercostal, 196, 197
 isolation of, 14–16
 mechanical properties of, 15, 16, 18–
 21, 180
 slow (tonic), 14–16, 18–21, 178, 217,
 229, 235
 tension and firing rate of, 141, 142
 types in man, 178
- Muscle (*see* Extrafusil muscles, Intra-
 fusil muscles)
- Muscle spindles (*see also* Gamma fusi-
 motor neurons, Intrafusil muscles)
 acceleration response of, 75
 afferents from, 45, 46, 65, 103, 104,
 109, 110
 amphibian, 28, 32, 36, 63, 64, 97
 anatomy of, 26–33, 45–49, 60
 annulo-spiral endings of, 45, 48–50
 “arousal” function of, 227, 230–232,
 235, 236, 265
 capsule of, 28, 32
 classification of Ruffini for, 45, 46, 49
 density of, 53–55
 distribution of, 49, 50–55
 “driving” of, 89, 90

- dry friction (stiction) in, 75
dynamic-static behaviour of, 63, 81–85
“early discharge” from, 71, 72, 95–97, 117
effects on alpha motoneurons (*see* Motoneurons, alpha)
electron micrographs of, 31, 32, 44
flower-spray endings of, 45, 48–50
frequency-extension curves of, 73, 74, 87, 88, 251, 257, 267
generator potential in, 63, 79
in sleep and wakefulness, 230–234
in slow and fast muscles, 51
intermediate type of, 78, 94, 196
in voluntary contractions, 168–170, 175, 186, 201, 210, 211
isolation of, 33–38, 79
mechanical theory of response of, 63, 64, 92
myotube (endings) of, 26, 31, 45, 67, 180, 184
nuclear bag fibres of, 28–32, 36–38, 80, 81, 92–94
nuclear chain fibres of, 28–32, 36–38, 80, 81, 92–94
pause in discharge of, 60, 61, 70–73, 79, 115–118, 198, 249
position sensitivity of, 62, 74–78, 87–89, 196, 270
primary endings of, described, 45, 48–50, 60–61
projections on cortex of, 218, 219
projections on cerebellum of, 242, 243
secondary endings of, described, 45, 48–50, 65–68
spontaneous activity in, 230–235
theoretical questions pertaining to, 92–95, 99, 183–187, 193, 255–259 and Chap. XII
thresholds to stretch of, 65, 68
transfer function of, 74
velocity sensitivity of, 62, 74–78, 83–87, 195, 196, 271
vibratory sensitivity of (*see* Vibratory sensitivity)
viscosity effects on (*see* Viscosity)
volitional activation of, 168–170, 175, 186, 201, 210, 211
Myanesin, 171, 172
- N**
- Neck receptors
in ligaments, 258
muscle spindles as, 54, 168, 170, 200, 257, 258
reflexes from, 165, 168, 170, 174, 257, 258
role in orientation, 257, 258
Non-specific afferents, 130, 221
- O**
- Occlusion, 101
- P**
- Pinna reflex, 235, 236
Postural reflexes (*see* Tone, Stretch reflexes)
Primary afferent depolarization (*see* Inhibitions, presynaptic)
Pseudoreflex, 177, 181, 182, 185, 270
Pyramidal tract
anatomy of, 153, 204, 205, 209–218
alpha fibres of, 204, 205, 207, 209
antidromic stimulation of, 204
conduction velocities within, 204, 207, 209
gamma fibres in, 201, 202
monosynaptic fibres of, 205, 207–209
section of, 211, 214, 217
tonic and phasic fibres of, 212, 213
- R**
- Recruitment, 100, 156, 177, 178, 235
order of, 178, 181, 182, 185, 270
Recurrent facilitation, 153, 159, 206
Recurrent inhibition, 115, 140, 145, 153–159
algebraical additivity in, 143, 145, 155, 206
cortical, 145, 155, 205, 206
facultative, 154
gamma neurons influenced by, 156
oculomotor, 252
phrenic, 154, 198
tonic motoneurons subject to, 156, 158, 270
Reflexes (*see also* Stretch reflexes, Motoneurons)
crossed, 120, 121

- extensor-flexor problems pertaining to, 109, 110, 118–120, 261–263
 - Magnus-de Kleijn type of, 165, 174
 - reciprocal, 103, 119, 190, 196, 215, 262
 - small-fibre proprioceptors producing, 121
 - Respiration
 - cerebellar effects on, 194
 - central drive potentials in, 196
 - diaphragmatic, 197–200
 - fusimotor activity in, 188–196, 199, 200
 - obstruction of, 187, 188, 190–193
 - vagal reflexes in, 188, 189, 197
 - Rigidity (*see also* Cerebellar rigidity, Stretch reflexes)
 - alcohol removing, 166, 167
 - alpha type of, 170, 171, 179–182, 184, 245, 246
 - cocaine removing, 166, 171, 179
 - gamma type of, 165, 166, 171, 179–182, 234–236, 240, 266, 268
 - Schiff-Sherrington type of, 150, 181
- S**
- Sensori-motor cortex (*see also* Pyramidal tract)
 - afterhyperpolarization in cells of, 212
 - antidromic identification of, 204
 - cells of, responding in volitional acts, 214–216
 - colony concept applied to, 204, 206–211, 221
 - colony concept interpreted, 207, 209, 211, 221
 - extensor-flexor problems pertaining to, 213, 214
 - inhibitions from, 210, 213, 220, 221
 - internuncial spinal effects from, 220
 - mapping of, 203, 204, 207–209, 216–220
 - monosynaptic projections from (*see above*, colony concept . . .)
 - motor area within, 201, 203–205, 209, 211, 214, 215, 217
 - motor points in, 204, 205
 - organization of output from, 212–216
 - phasic cells of, 209, 212
 - polymodal sensory representation in, 217–220
 - “pyramidal” animals and, 213
 - reciprocal action from, 215
 - recurrent facilitation in, 206, 212
 - recurrent inhibition in, 145, 155, 205, 206, 212
 - selective stimulation of, 207
 - size of pyramidal cells of, 206, 212
 - spindles activated from, 201, 211, 218, 219
 - spindles projecting onto, 218, 219
 - tonic cells of, 211, 212
 - Servo-theoretical notions (*see also* Alpha-gamma linkage)
 - alpha control, 73, 271
 - applications in general of, 184–186, 193, 209, 225, 260, 264, 265, 267–273
 - criticism of, 270
 - damping and viscosity, 271, 272
 - feedback, 114, 115, 120, 156–159, 167, 170, 206, 219, 256, 266, 269, 271
 - follow-up-length servo, 184, 193, 269, 271
 - gain of servo, 270
 - length setting maintained, 73, 87, 193, 257, 266–268
 - load compensation, 185, 191, 193, 199, 209, 257, 262, 273
 - misalignment detectors, 193, 257
 - tonus control, 165, 212, 213, 264, 265
 - transport lag, 246, 271, 272
 - servo-assisted movements, 271, 275
 - velocity control, 85, 246, 271–275
 - Silent period
 - autogenetic inhibition in, 113, 115
 - effect of spindle pause, 115, 116
 - filling-out of, 117, 118
 - Spasticity, 166, 167, 177
 - Spinal animal, 235
 - spindles in, 234, 235
 - Stabilization of firing rate, 153–159, 200, 221–225, 270, 271
 - Stepping, 120, 259–263
 - alpha-gamma linkage in, 259, 260
 - tendon organs in, 261, 262
 - treadmill walking, 259, 260
 - yielding in, 261, 262

- Stretch reflexes (*see also* Rigidity)
 alcohol removing, 166, 167
 alpha-gamma linkage in (*see* Alpha-gamma linkage)
 cocaine removing, 166, 171, 175, 179
 compared with vibratory reflex, 175, 176, 265
 decerebrate v. passive, 62, 165–167, 268, 269
 depolarized motoneurons required for, 167, 184, 265
 firing rates in, 100, 101, 176 and Figs 85–87
 gain across, 175, 178, 270
 gamma contribution to, 164–170, 179, 180, 184, 269, 270
 general comments on, 104, 105, 165, 179, 183–186, 234, 235, 264, 269
 in single motoneurons, 126–130 and Figs 71, 85–87
 jerks as, 164, 174, 233, 269
 monosynaptic component of, 104, 105, 115, 184
 polysynaptic organization in, 104, 105, 176
 primaries in, 101, 103
 recruitment in (*see* Recruitment)
 secondaries in, 109, 110, 118, 176, 265
 tension control and, 177–183
 theoretical problems related to, 167, 183–186, 234, 235, 264–270
- Subliminal fringe, 102, 178, 183
- Succinylcholine
 differentiating primaries from secondaries, 61, 94
 differentiating spindles from tendon organs, 198
 differentiating intrafusal fibre types, 61
- Supraspinal effects (*see* specific sites such as Brain stem, Sensori-motor cortex, etc.)
- Surplus excitation, 100, 158, 159
- T**
- Tandem spindles, 28, 50, 51, 71
- Tendon jerks (*see* Stretch reflexes, jerks as)
- Tendon organs
 afferents from, 49, 58, 103, 104
 anatomy of, 56–59
 diaphragmatic, 198, 200
 distribution of, 50
 effects of, on motoneurons (*see* Motoneurons, alpha)
 in eye muscles, 248, 249, 255, 257
 role of, in stepping, 120, 261, 262
 rubro-spinal control of, 237
 stimulation of, 60, 61, 106–108, 110–115, 119, 120
 tension control by, 177, 180, 255, 256
 thresholds of, 65, 111
 transfer function of, 112
 vibratory sensitivity of, 173
- Thalamus, 231
- Tone (*see also* Extrafusal muscles, Servo-theoretical notions, Stretch reflexes), 164, 165, 173, 176, 180–182, 231, 264, 265, 272
- Tracts (*see also* Pyramidal tract)
 cuneo-cerebellar, 242
 dorsal spino-cerebellar, 139, 145, 242
 reticulo-spinal, 228–230
 rubro-spinal, 236, 237
 ventral spino-cerebellar, 209, 242
 vestibulo-spinal, 98, 229, 230, 239, 258
- Tremor, 248, 253, 272
- V**
- Velocity and force problems (*see* Force-velocity relations)
- Vestibular nuclei (*see also* Tracts)
 alpha-gamma linkage and, 229, 239
 Deiters', 98, 117, 229, 238, 239, 241
 "early discharge" and, 97, 98
 eye movements and, 248, 254, 255, 257
- Vestibular organs, 239, 248, 254, 255, 258
 alpha-gamma linkage and, 229, 239
 neck muscles and, 248, 255, 257–259
 nystagmus and, 254, 257
- Vibratory reflex, 168, 169, 172–177
 barbiturates suppressing, 174
 cocaine removing, 175
 compared with stretch reflexes, 175, 176, 265, 266
 mobilizing tone, 172, 173

- polysynaptic organization of, 173, 174, 176
 - suppressing jerks, 174
 - voluntary facilitation of, 170, 174
 - Vibratory sensitivity
 - of primaries, 33, 68–70, 91, 92, 173, 174, 195
 - of secondaries, 68–70, 91, 195
 - of tendon organs, 173
 - Viscosity (*see also* Muscle spindles)
 - general muscular, 25
 - interacting with elasticity (*see* Intrafusal muscles)
 - spindle properties ascribed to, 33, 36, 63, 64, 67, 74, 91, 92, 94, 272
 - Voluntary movements, 210–212, 214–216
 - co-activation of alpha and gamma neurons in, 168–170, 175, 186, 201, 210, 211
 - deficits of, after root section, 216, 217
 - phasic-tonic problems with regard to, 212, 213, 221–224
- W**
- Walking (*see* Stepping)
